

Create content

The main purpose of your website is to create content.

Create a Google Photo's page

Replace 1000000000000000000 with your Google Photo's ID

```
<!-- Show the album --> <div tal:condition="exists:REQUEST/GET/album"> <div tal:define="album
php:Poodle\Google\Photos::getAlbum('1000000000000000000', ${REQUEST/GET/album})" id="media-album-items"> <h2
tal:content="album/title">album/title</h2> <p tal:content="album/summary">album/summary</p> <figure tal:repeat="photo album/photos"
itemprop="associatedMedia" itemscope="" itemtype="http://schema.org/ImageObject"> <a itemprop="contentUrl" tal:attributes="href photo/url;
data-width photo/width; data-height photo/height"> <img alt="" itemprop="thumbnail" tal:attributes="src photo/thumbURL; title photo/title"/>
</a> <figcaption itemprop="caption description" tal:content="photo/title">photo/title</figcaption> </figure> </div> <!-- PhotoSwipe feature, can
be omitted --> <div tal:omit-tag="" tal:include="poodle/media/photoswipe"></div> </div> <!-- Show all albums --> <div tal:condition-else="">
<a tal:repeat="album php:Poodle\Google\Photos::getAlbums('1000000000000000000')" tal:attributes="href '?album=${album/id}'"
style="display:inline-block; width:49%"> <h2 tal:content="album/title">album/title</h2> <img tal:attributes="src album/thumbURL" alt=""/> <p
tal:content="album/summary">album/summary</p> </a> </div>
```

Create a remote calendar events page

Replace 'https://calendar.google.com/calendar/ical/calendar/basic.ics' with your own

```
<!-- Show the upcoming events --> <div class="vevents" tal:repeat="month
php:Poodle\ICa\ICS::upcoming('https://calendar.google.com/calendar/ical/calendar/basic.ics')"> <h2 tal:content="month/name">Month</h2>
<div> <div tal:repeat="event month/events" class="vevent"> <h3 tal:content="event/summary">SUMMARY</h3> <div
tal:condition="event/location">Locatie: <span tal:replace="event/location">LOCATION</span></div> <div class="vevent-date"><span
tal:replace="php:context.L10N.date('D d', ${event/dtstart})">Za 01</span><span tal:condition="event/dtend"> t/m <span
tal:replace="php:context.L10N.date('D d', ${event/dtend})">Su 02</span></span></div> <div
tal:content="event/description">DESCRIPTION</div> </div> </div> </div> <!-- Show the past events --> <h1 style="margin-bottom: 1em;
margin-top: 4em">Past events</h1> <div class="vevents" tal:repeat="month
php:Poodle\ICa\ICS::past('https://calendar.google.com/calendar/ical/calendar/basic.ics')"> <h2 tal:content="month/name">Month</h2> <div>
<div tal:repeat="event month/events" class="vevent"> <h3 tal:content="event/summary">SUMMARY</h3> <div
tal:condition="event/location">Locatie: <span tal:replace="event/location">LOCATION</span></div> <div class="vevent-date"><span
tal:replace="php:context.L10N.date('D d', ${event/dtstart})">Za 01</span><span tal:condition="event/dtend"> t/m <span
tal:replace="php:context.L10N.date('D d', ${event/dtend})">Su 02</span></span></div> <div
tal:content="event/description">DESCRIPTION</div> </div> </div> </div>
```
